**3D**  
Ceiling Clouds

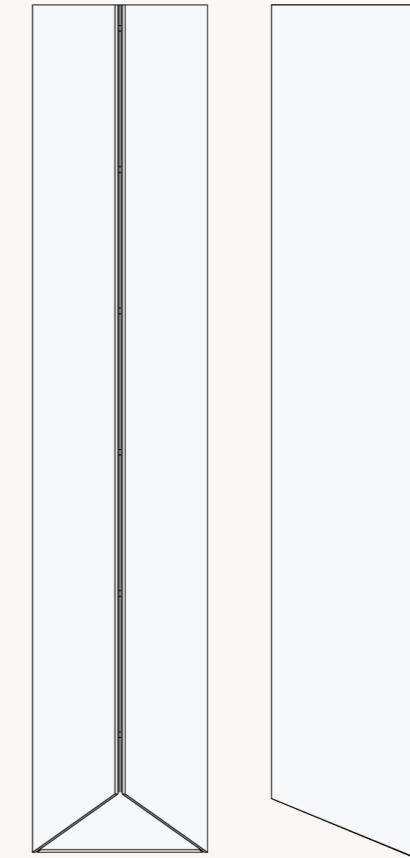

**Acoufelt 3D Ceiling Clouds** are acoustic products designed to offer a visually striking and highly effective solution for managing sound in shared spaces. Available in a selection of sculptural designs including Pendant, Crest, Swing, Canopy, and Castillo these 3D forms add depth and dimension while contributing to acoustic comfort.

With a wide range of colours, sizes, and thicknesses to choose from, each Cloud can be tailored to suit your design intent. Vary the height and layout for a dynamic, floating installation that softens sound and elevates visual appeal.

# PENDANT

Transform sound absorption into grand-scale art. Blend and suspend 'Pendant' vertical baffles in a cloud of colours and sizes to create a distinct, beautifully performing sculptural installation.

A modern movie theater interior. The ceiling is a prominent feature, consisting of a series of large, overlapping, semi-circular panels in a teal-blue color. These panels are set into a black frame that runs along the perimeter of the room. The walls are a warm, light brown color, and there are vertical white light strips running along the top and bottom edges of the walls. The seating consists of rows of grey theater seats, arranged in a tiered fashion that slopes upwards towards the front. The floor is a dark, polished surface. The overall atmosphere is clean, modern, and minimalist.

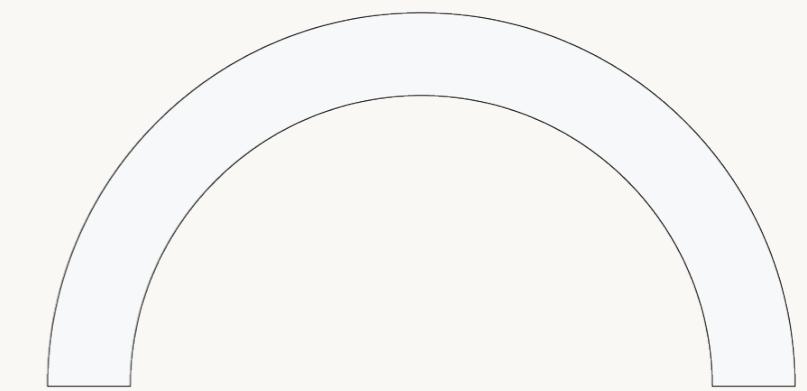

SWING

The 'Swing' ceiling clouds are shaped to resemble the black rubber swing seat from childhood. They can be easily suspended from the ceiling and add a playful touch to any space with their organic shape while providing targeted noise reduction.

# CREST

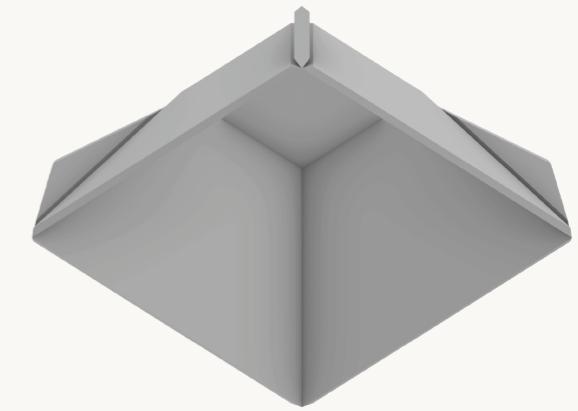

With beautifully shaped, sound-absorbing felt, 'Crest' ceiling clouds allow you to design an interesting ceiling scape while dampening distracting noise from busy spaces.

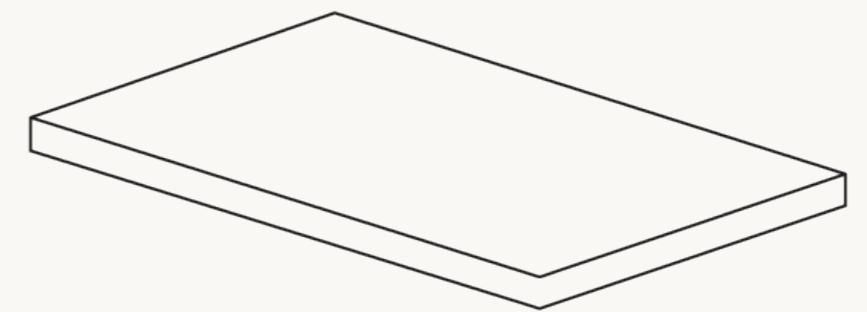

CASTILLO

Designed to rest securely within a standard T-Grid, 'Castillo' relies solely on gravity and force for seamless installation—no additional fixings required. This intelligent design ensures a quick and efficient setup while delivering a bold, architectural aesthetic.

# CANOPY

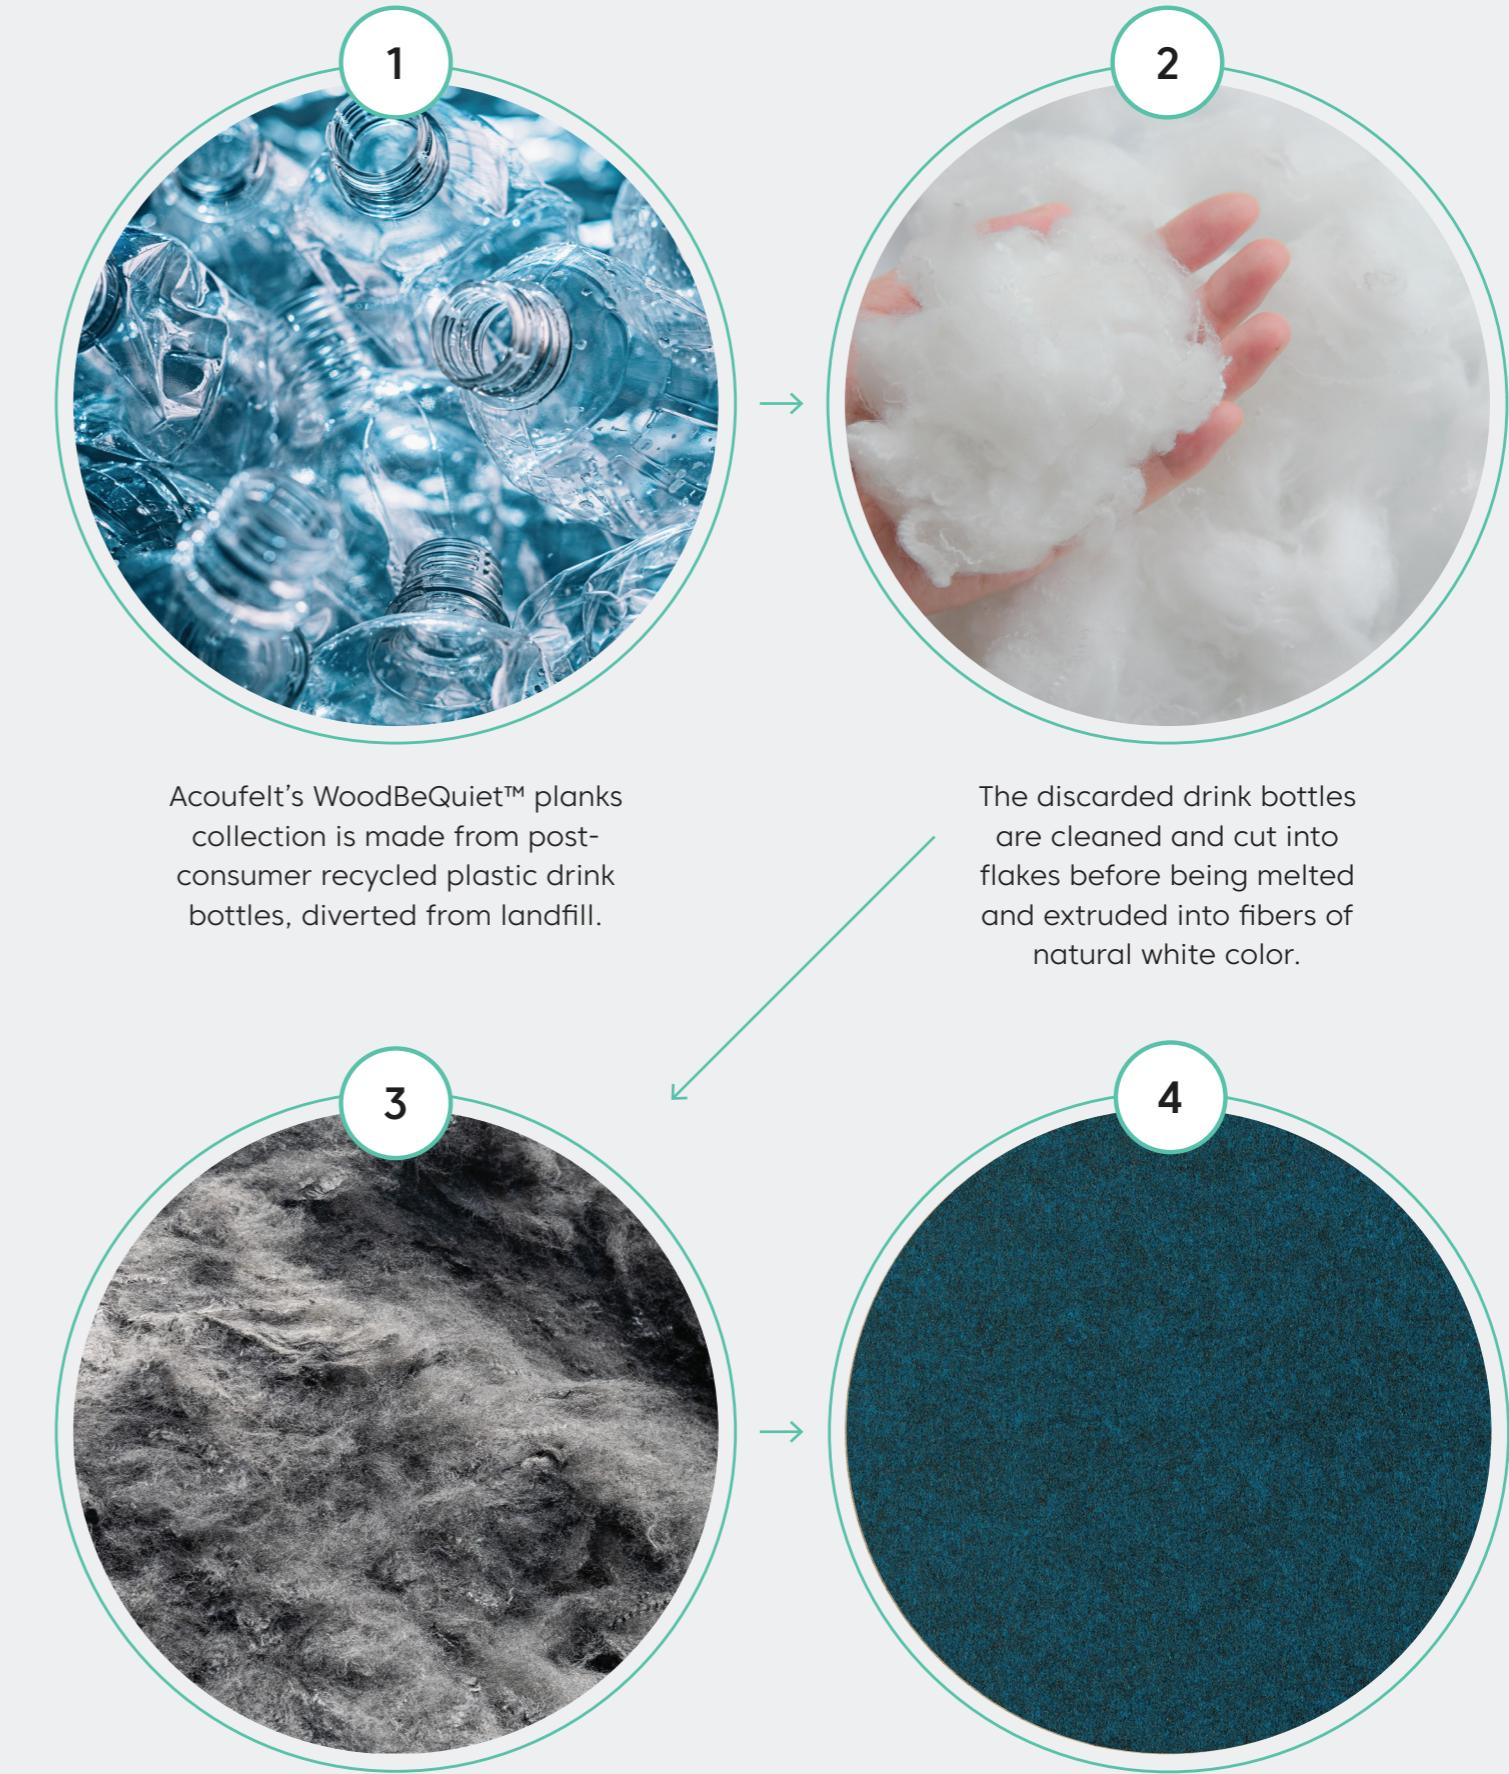

'Canopy' is designed to seamlessly integrate with your existing decor, offering a clean, minimalist look that complements any design aesthetic. The 50mm raised edges enhance the acoustic performance of the generously scaled rectangles, adding both volume and efficiency in noise reduction.

## DESIGNED TO MEET YOUR GREEN BUILDING GOALS.

Waste is converted into useful design in the creation of WoodBeQuiet™. Made from a minimum of 60% post-consumer recycled material, each carton contains the average equivalent of 324 x 600ml recycled plastic drinking bottles diverted from landfill.

In addition, planks are produced using 40 per cent solar energy – honed through solar panels on the factory roof – and are fully recyclable at the end of their use. Users can also be assured that planks are certified ‘Red List Free’ – meaning they are free from unsafe, polluting materials.
