LAYERED

Ceiling Baffles

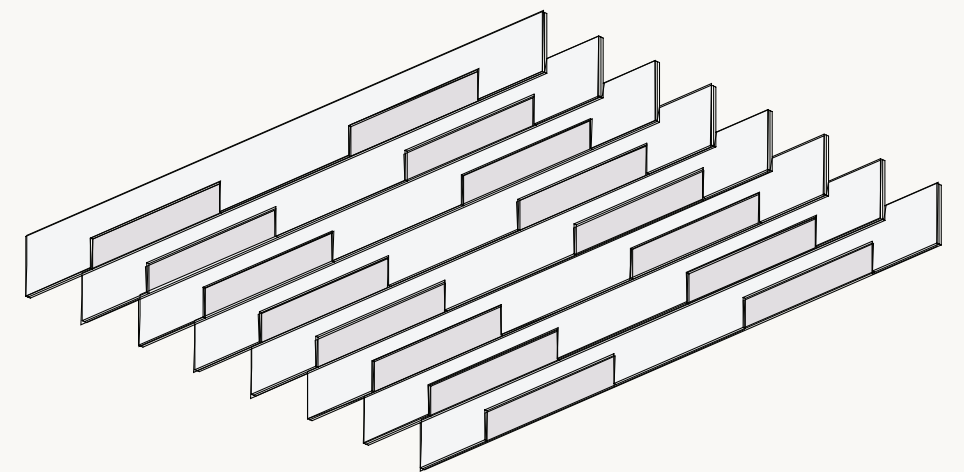

24mm Layered baffles offer a unique double-layer construction, enabling users to choose different colours for each side, creating a striking two-tone effect.

Available in two designs, 'Reveal' and 'Groove', the distinctive cuts highlight contrasting colors in different geometric shapes. Made from two layers of FilaSorb™ premium acoustic felt, these baffles deliver excellent acoustic performance and can be selected in any combination of FilaSorb™ colourways.

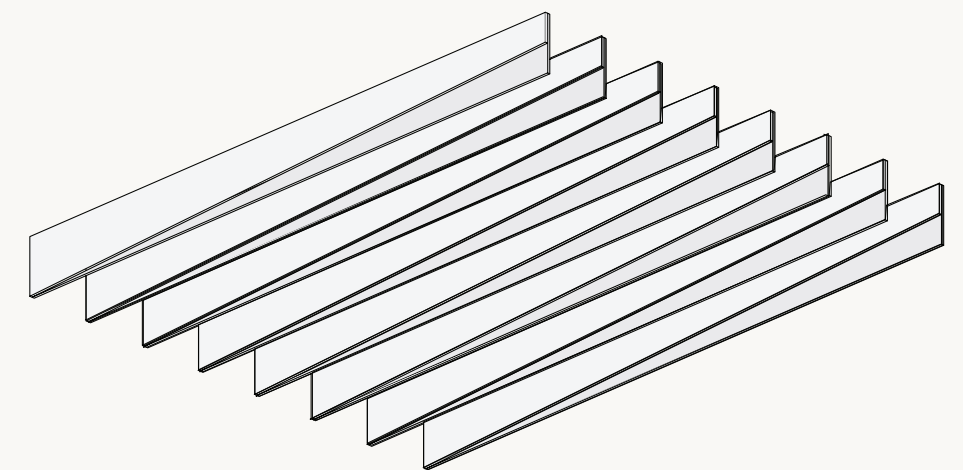

GROOVE

‘Groove’ layered baffles feature a bold, linear cut design that reveals a second colour beneath the surface, creating a strong, directional aesthetic. Crafted from double-layered FilaSorb™ acoustic felt, Groove combines standout visuals with premium acoustic performance, available in any combination of FilaSorb™ colourways.

REVEAL

‘Reveal’ layered baffles showcase a geometric cut-out design that exposes a contrasting colour underneath, offering a dynamic, architectural feel. Made with two layers of FilaSorb™ premium acoustic felt, Reveal delivers both visual impact and exceptional sound absorption, customisable in a wide range of FilaSorb™ colourways.

DESIGNED TO MEET YOUR GREEN BUILDING GOALS.

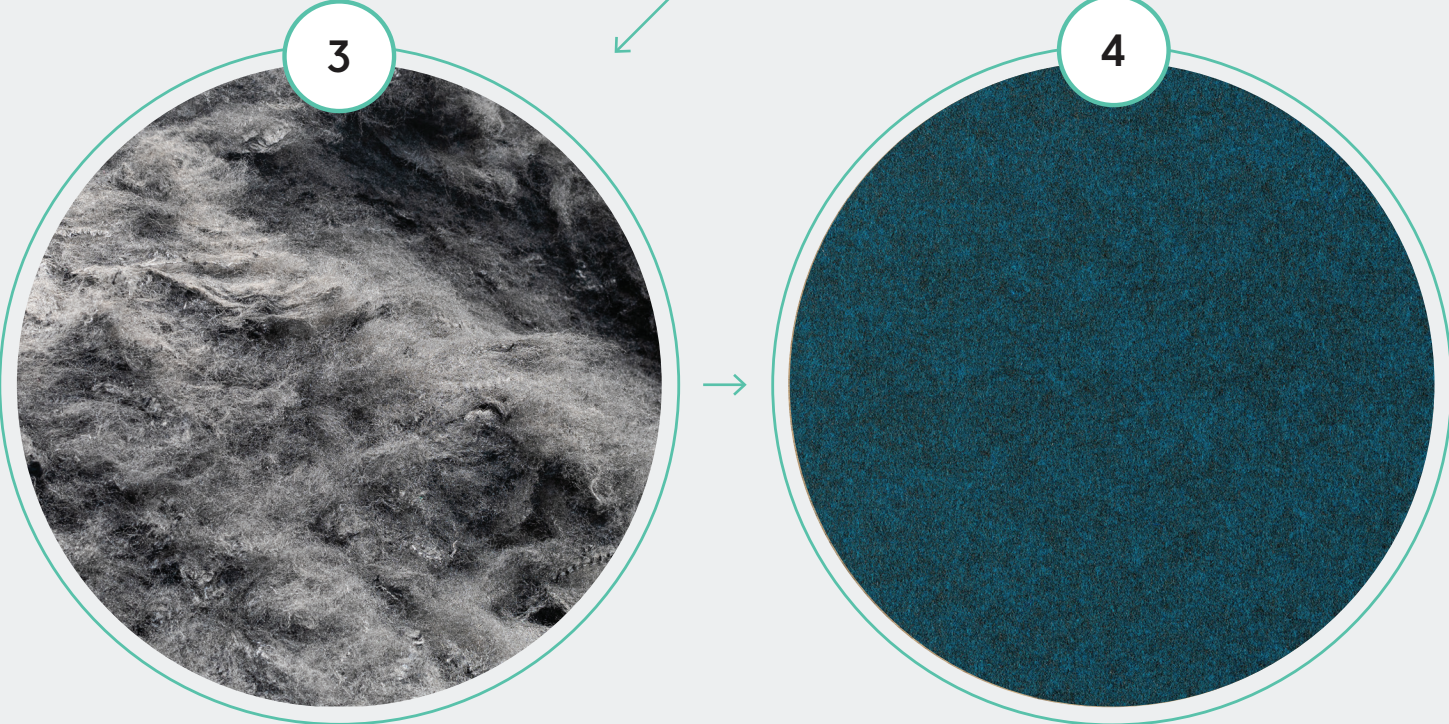

Waste is converted into useful design in the creation of WoodBeQuiet™. Made from a minimum of 60% post-consumer recycled material, each carton contains the average equivalent of 324 x 600ml recycled plastic drinking bottles diverted from landfill.

In addition, planks are produced using 40 per cent solar energy – honed through solar panels on the factory roof – and are fully recyclable at the end of their use. Users can also be assured that planks are certified ‘Red List Free’ – meaning they are free from unsafe, polluting materials.

Acoufelt's WoodBeQuiet™ planks collection is made from post-consumer recycled plastic drink bottles, diverted from landfill.

The discarded drink bottles are cleaned and cut into flakes before being melted and extruded into fibers of natural white color.

The regenerated fibers are clean and odorless like virgin fibers.

The regenerated fibers are then colored or printed and used to construct brand new products like WoodBeQuiet™ planks.
