Satellite Carpet Tile

The Satellite carpet tile collection is a cost effective acoustic flooring treatment that doesn't compromise on aesthetics. Designed to also be used with Acoufelt's acoustic underlay for optimal acoustic performance, the Satellite collection provides basic acoustic performance for situations where more comprehensive acoustic treatments cannot be applied.

This carpet tile features a PVC backing and is made in the 500 x 500 mm square tile format. It is the 100% solution dyed nylon loop pile, made from Econyl regenerated fishing nets and waste, which delivers the majority of the acoustic performance in the tile.

It was thinking about opening up the "universe" of opportunity that inspired the design and naming of Satellite. The plain stipple of tonal dark colours of the Satellite range is characteristic of a distant view of space. These dark tones are broken by subtle lines, inspired by orbit lines of major satellites as they would appear on a map of space.

This tile is QuickDrop™ compatible, making it suitable for regularly changing spaces, or for abnormally high traffic installations requiring frequent tile rotation. The Satellite collection is adaptable as it is flexible.
