

Shapes

Installation Guide

June 2023

Adhesive Method

Tools & materials required:

- Clean gloves
- Utility knife
- Straight edge
- Measuring tape
- Pencil
- Ladder/scaffolding
- Caulking gun
- J-Roller
- Construction adhesive or spray adhesive

Preparation

1. Wear clean white gloves throughout the installation process. Use matching caulk to fill in any unwanted cracks.
2. After preparing the wall for installation, use the bar level to dry fit (without adhesive) and measure the desired formation of each Shape (see recommended patterns). Ensure they match up according to the desired pattern formation. Once they line up, use a pencil to mark out the position of each shape on the wall.
3. Trim off any excess material around joins, pipes, vents or lighting (as required).

Applying construction adhesive

Using the caulking gun and construction adhesive, apply the adhesive around the inner edge of the Shape. To avoid adhesive flowing through the joins when the Shapes are installed, apply the adhesive two finger widths away from the perimeter, then apply adhesive in a zig zag pattern across the centre of the Shape (as shown in **fig. a**).

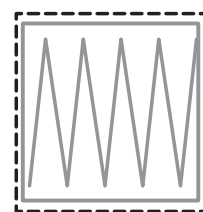

Applying spray adhesive

Apply the spray adhesive around the inner edge of the Shape, 50-100mm widths away from the perimeter (as shown in **fig. b**). Wait 5-10 minutes for the adhesive to become tacky before installing the Shapes onto the wall.

Installation

4. Keeping the Shape as straight as possible, press the underside of the Shape onto the surface. Apply pressure to the Shape when mounting to ensure the edges are butted together, unless you're looking to achieve a reveal between each Shape.
5. Apply even pressure with the roller and firmly press all areas of the Shape to the surface. If required, hold the Shape in place for a few minutes.
6. Wipe away any leaked or excess adhesive from the Shape before installing the neighbouring Shape. Avoid any adhesive making contact with face of the Shape.
7. Repeat process until all Shapes are installed in accordance with your desired pattern formation.
